

Thursday Nov. 20th

Dear Mr Vardi,

This morning we saw Mr Dowd.
Thank you for seeing me and offering
such constructive advice. As you
predicted, Mr Dowd did not take
offence and read your report and
examined the X-Rays.

On examination he felt (as you
did) the soft tissues might be
causing the problem - so -
tomorrow morning in the Day
Surgery, I will have a G.A and
he will inject a long-lasting
Cortisone close into the soft
tissue.

He is very reluctant to embark on
further surgery, and he hopes this
procedure might be the solution - if it does
not help (!??) Hopefully the pain will
vanish and my mobility improve.

Once again my most grateful thanks to
you for seeing me and for your concern
and interest in my knee problem - Viv
never fails to tell me how sympathetic &
caring you have been.

Kindest regards,

Maya Sverdlov.

P.S. Good luck for your
hand operation next month
